Introduction to Java

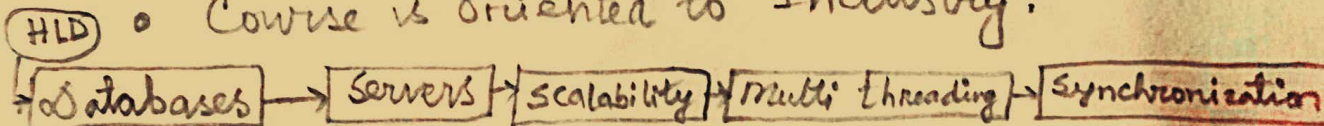

↓
We actually come up with the design first. What are the modules, how do they interact with each other and how do you deal with scalability.

- Which means if you are able to provide service to 100 people now, how do you scale it to 1M people. Is the underlying database capable of holding those many requests or how many servers do you want to have web servers.

- System Design
- Problem Solving
- Course is oriented to Industry.

Never Ending...

Parallelization
